1 Introduction

This report provides the documentation for the mobile web assignment for SEM2220. The aim of this assignment is to add some additional functionality to an existing code base comprising of a responsive website wrapped as a PhoneGap application for deployment as a native mobile application. Section 2 discusses the implementation of dynamic sessions lists in the existing code base provided with the assignment brief. This section will discuss both the final solution and any problems encountered. Section 3 discusses an additional feature implemented for "flair" marks. Again this will focus on the solution produced and outline any difficulties encountered along the way.

2 Implementing the Dynamic Sessions List

3 Implementing Interactive Venue Maps
